ICBM Meeting via Skype

7:00pm September 12, 2011

1 Attendance

- Alex Nilson
- Brett Hitchcock
- Scott Beddall

2 Questions for Customer

- Continued working on questions for client.
- What coding standards should we use?
- How many concurrent users does the system need to support?
- Will we have a budget?
- What version of SQL will we be using?
- Will we need to provide our own development server?
- What platform will we be working on?
- What kind of people will be using the system?
- How much security should we have?
- What sort of password and username standards will the system be using?
- How much security will we need to implement?
- What are some things the client doesn't like about the current system?
- How do the timestamps work?
- Are there other people we can get in contact with to ask about the current product?

3   Etc.

- We need to get contact info for the client.

- We resolved to treat all input as "tainted" to avoid security issues.

- We resolved to use SHA to secure passwords.

- We need to develop use cases.
